No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1984 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 235

NUMBER 1, NOVEMBER 15, 1984

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

Light-Induced Proton Gradients and Internal Volumes in Chromatophores of *Rhodopseudomonas sphaeroides*
B. Andrea Melandri, Rolf J. Mehlhorn, and Lester Packer 97

Chelated Iron-Catalyzed $OH^{\cdot}$ Formation from Paraquat Radicals and H_2O_2: Mechanism of Formate Oxidation
Harry C. Sutton and Christine C. Winterbourn 106

Hydroxyl Radical Production from Hydrogen Peroxide and Enzymatically Generated Paraquat Radicals: Catalytic Requirements and Oxygen Dependence
Christine C. Winterbourn and Harry C. Sutton 116

Control of Cellular Redox Potential as Measured in a Steady-State, Cell-Free System
M. Kutlay Burat, Tezer Burat, W. I. A. Davis-Van Thienen, and E. Jack Davis 150

ENZYME MECHANISMS AND METABOLISM

Detection of β-Carbanion Formation during Kynurenine Hydrolysis Catalyzed by *Pseudomonas marginalis* Kynureninase *Gary S. Bild and Judy C. Morris* 41

Stability of the Complex Formed between French Bean (*Phaseolus vulgaris*) Phenylalanine Ammonia-Lyase and Its Transition-State Analog
D. Hugh Jones and Don H. Northcote 167

GLYCOPROTEINS AND GLYCOLIPIDS

Purification of Hamster Melanoma Tyrosinases and Structural Studies of Their Asparagine-Linked Sugar Chains
Takashi Ohkura, Katsuko Yamashita, Yutaka Mishima, and Akira Kobata 63

Isolation of the Major Chondroitin Sulfate/Dermatan Sulfate and Heparan Sulfate Proteoglycans from Embryonic Chicken Retina *John E. Morris* 127

HORMONE STRUCTURE AND FUNCTION

Interaction of Thyroid Hormone and Sex Steroids at the Rabbit Reticulocyte Membrane *in Vitro:* Control by 17β-Estradiol and Testosterone of Thyroid Hormone-Responsive Ca^{2+}-ATPase Activity
William D. Lawrence, Paul J. Davis, Susan D. Blas, and Marion Schoenl 78

Regulation of High- and Low-Affinity Epidermal Growth Factor Receptors by Glucocorticoids
Bradford O. Fanger, Dace Viceps-Madore, and John A. Cidlowski 141

LIPIDS AND PROSTAGLANDINS

Biosynthesis of Alkanes by Particulate and Solubilized Enzyme Preparations from Pea Leaves (*Pisum sativum*)
Andrew L. Bognar, Gopinadhan Paliyath, Linda Rogers, and P. E. Kolattukudy 8

Phosphoglyceride Biosynthesis by Brain Microsomes: Centrophenoxine, SaH-42-348, and DH-990 Inhibit Phospholipid *N*-Methylation
Alan K. Percy, John F. Moore, and Charles J. Waechter 18

MEMBRANES, CELL SURFACES, AND RECEPTORS

A Plasma Membrane Mg^{2+}-ATPase in the Cellular Slime Mold *Dictyostelium discoideum* *James I. S. Macdonald and Gerald Weeks* 1
Effect of Exogenous Addition of Hemin on the Biogenesis of Mitochondrial Membranes during Glucose Repression in *Saccharomyces cerevisiae*
G. Gopalan, J. Jayaraman, and C. Rajamanickam 159

OXYGENASES, MICROSOMES, AND *P*-450 REACTIONS

Turnover of Membrane Proteins: Kinetics of Induction and Degradation of Seven Forms of Rat Liver Microsomal Cytochrome *P*-450, NADPH-Cytochrome *P*-450 Reductase, and Epoxide Hydrolase
Hiroshi Shiraki and F. Peter Guengerich 86
Immunochemical Evidence for a Role of Cytochrome *P*-450 in Liver Microsomal Ethanol Oxidation
Dennis R. Koop, Gerald D. Nordblom, and Minor J. Coon 228
Use of Monoclonal Antibody Probes against Rat Hepatic Cytochromes *P*-450c and *P*-450d to Detect Immunochemically Related Isozymes in Liver Microsomes from Different Species *Paul E. Thomas, Judith Reidy, Linda M. Reik, Dene E. Ryan, Dennis R. Koop, and Wayne Levin* 239

PHYSICAL BIOCHEMISTRY

Kinetic and Thermodynamic Parameters for Schiff Base Formation of Vitamin B_6 Derivatives with Amino Acids
Heinrich Wiesinger and Hans-Jürgen Hinz 34
Collagen Fibrillogenesis *in Vitro:* Comparison of Types I, II, and III
David E. Birk and Frederick H. Silver 178

PLANT BIOCHEMISTRY AND PHOTOSYNTHESIS

Transcriptional Activity of Isolated Maize Chloroplasts
Arie Altman, Bennett N. Cohen, Herbert Weissbach, and Nathan Brot 26
Triton X-114 Phase Fractionation of Membrane Proteins of the Cyanobacterium *Anacystis nidulans* R2 *Terry M. Bricker and Louis A. Sherman* 204
N-Malonyltransferases from Peanut
Ulrich Matern, Christa Feser, and Werner Heller 218
Biosynthesis of Ascaridole: Iodide Peroxidase-Catalyzed Synthesis of a Monoterpene Endoperoxide in Soluble Extracts of *Chenopodium ambrosioides* Fruit
Mark A. Johnson and Rodney Croteau 254

PROTEIN STRUCTURE AND FUNCTION

Solid-Phase Protein and Peptide Sequencing Using either 4-*N*,*N*-Dimethylaminoazobenzene 4′-Isothiocyanate or Phenylisothiocyanate
Hsieng S. Lu and Robert W. Gracy 48

Comparison of the Binding of Chicken α-Macroglobulin and Ovomacroglobulin to the Mammalian α_2-Macroglobulin Receptor
Steven R. Feldman and Salvatore V. Pizzo 267

PROTEIN SYNTHESIS AND POST-TRANSLATIONAL PROCESSING

The Gene Encoding Translation Initiation Factor 3 Is Highly Conserved in Gram-Negative Bacteria *Ajay Pramanik and Ira Schwartz* 276

REGULATION OF METABOLISM AND OF ENZYME ACTION

Phosphorylation of Rat Liver Glycogen Synthase Bound to the Glycogen Particle
Akira Akatsuka, Toolsee J. Singh, and Kuo-Ping Huang 186

Ca^{2+}, Calmodulin-Dependent Phosphorylation, and Inactivation of Glycogen Synthase by a Brain Protein Kinase *Takafumi Iwasa, Kohji Fukunaga, Hideyuki Yamamoto, Etsuro Tanaka, and Eishichi Miyamoto* 212

STRUCTURAL PROTEINS

Mammalian Brain Microtubules Are Sensitive to Cyclic AMP *in Vitro*
Rafael Manso-Martínez, Rosario Palomares, and Félix Pariente 196

NUMBER 2, DECEMBER 1984

INVITED PAPER

The Physiology and Biochemistry of Polyamines in Plants
Robert D. Slocum, Ravindar Kaur-Sawhney, and Arthur W. Galston 283

BIOLOGICAL OXIDATIONS AND BIOENERGETICS

X-Ray Absorption Studies of Intermediates in Peroxidase Activity
B. Chance, L. Powers, Y. Ching, T. Poulos, G. R. Schonbaum, I. Yamazaki, and K. G. Paul 596

Copper Increases Superoxide Dismutase Activity in Rat Liver
Sofia G. Ljutakova, Elevter M. Russanov, and Stefan I. Liochev 636

Lipid Peroxidation Increases the Molecular Order of Microsomal Membranes
Mark T. Curtis, Donna Gilfor, and John L. Farber 644

Low-Level Luminescence from Microsomes Exposed to Enzymatic Systems that Generate Triplet Species *Ana Campa and Giuseppe Cilento* 673

ENZYME MECHANISMS AND METABOLISM

Chemical Intermediates in Dopamine Oxidation by Tyrosinase, and Kinetic Studies of the Process *M. Jimenez, F. Garcia-Carmona, F. Garcia-Canovas, J. L. Iborra, J. A. Lozano, and F. Martinez* 438

Covalent Modification of the Solubilized Rat Liver Vitamin K-Dependent Carboxylase with Pyridoxal-5′-phosphate
William K. Kappel and Robert E. Olson 521

Substrate-Dependent Kinetic Behavior of Horse Plasma Cholinesterase: Evidence for Kinetically Distinct Populations of Active Sites
Zerrin Söylemez and Inci Özer 650

Equilibration of [^{3}H]Glucosamine and [^{35}S]Sulfate with Intracellular Pools of UDP-*N*-Acetylhexosamine and 3′-Phosphoadenosine-5′-phosphosulfate (PAPS) in Cultured Fibroblasts
Göran Eriksson, Bengt Särnstrand, and Anders Malmström 692

GLYCOPROTEINS AND GLYCOLIPIDS

The Effect of Deoxymannojirimycin on the Processing of the Influenza Viral Glycoproteins *Alan D. Elbein, Gunter Legler, Annette Tlusty, William McDowell, and Ralph Schwarz* 579

HORMONE STRUCTURE AND FUNCTION

Partial Purification from Human Mononuclear Cells and Placental Plasma Membranes of an Insulin Mediator Which Stimulates Pyruvate Dehydrogenase and Suppresses Glucose-6-phosphatase
Susumu Suzuki, Takayoshi Toyota, Hiroshi Suzuki, and Yoshio Goto 418

IMMUNOLOGY

Characterization of the Group-Specific Polysaccharide of Group B *Streptococcus*
David G. Pritchard, Barry M. Gray, and Hugh C. Dillon, Jr. 385

LIPIDS AND PROSTAGLANDINS

High-Performance Liquid Chromatographic Determination of Phospholipid Peroxidation Products of Rat Liver after Carbon Tetrachloride Administration
Junji Terao, Ichiro Asano, and Setsuro Matsushita 326
Characterization of a Phosphatidylinositol 4-Phosphate-Specific Phosphomonoesterase in Rat Liver Nuclear Envelopes
Charles D. Smith and William W. Wells 529

MEMBRANES, CELL SURFACES, AND RECEPTORS

A Second, Slower Inactivation Process in Acetylcholine Receptor-Rich Membrane Vesicles Prepared from *Electrophorus electricus* *Hitoshi Aoshima* 312
Sodium Gradient-Stimulated Transport of L-Carnitine into Renal Brush Border Membrane Vesicles: Kinetics, Specificity, and Regulation by Dietary Carnitine
Charles J. Rebouche and Diane L. Mack 393
Structural Characterization of Labeled Clathrin and Coated Vesicles
K. Prasad, A. Alfsen, R. E. Lippoldt, P. K. Nandi, and H. Edelhoch 403
Isolation and Characterization of Two Species of Receptor which Bind Intrinsic Factor *George Marcoullis and Sheldon P. Rothenberg* 482
Lysophosphatidylcholine Cell Depolarization: Increased Membrane Permeability for Use in the Determination of Cell Membrane Potentials
Richard L. Gallo, Robert P. Wersto, Robert H. Notter, and Jacob N. Finkelstein 544
Rapid Purification of a Phospholipase-Free α-Bungarotoxin: Maintenance of Cation Barriers of Acetylcholine Receptor Membranes upon Preincubation with Purified Toxin *Jose A. Ferragut, Jose M. Gonzalez-Ros, Darrell L. Peterson, Debbie L. Weir, Richard C. Franson, and Marino Martinez-Carrion* 628
Characterization of Three Intermediates in the Biosynthesis of Teichuronic Acid of *Micrococcus luteus*
Gary L. Johnson, Jeff H. Hoger, J. Harris Ratnayake, and John S. Anderson 679

OXYGENASES, MICROSOMES, AND *P*-450 REACTIONS

NH_2-Terminal Sequence Analyses of Four Rat Hepatic Microsomal Cytochromes *P*-450 *Mitsuru Haniu, Dene E. Ryan, Shinji Iida, Charles S. Lieber, Wayne Levin, and John E. Shively* 304

Alterations in Intracellular Thiol Homeostasis during the Metabolism of Menadione by Isolated Rat Hepatocytes *Donato Di Monte, David Ross, Giorgio Bellomo, Lena Eklöw, and Sten Orrenius* 334

Menadione-Induced Cytotoxicity Is Associated with Protein Thiol Oxidation and Alteration in Intracellular Ca^{2+} Homeostasis *Donato Di Monte, Giorgio Bellomo, Hjördis Thor, Pierluigi Nicotera, and Sten Orrenius* 343

Conversion of 1-Naphthol to Naphthoquinone Metabolites by Rat Liver Microsomes: Demonstration by High-Performance Liquid Chromatography with Reductive Electrochemical Detection *David S. Fluck, Stephen M. Rappaport, David A. Eastmond, and Martyn T. Smith* 351

Induction of Rabbit Hepatic Microsomal Cytochrome *P*-450 by Imidazole: Enhanced Metabolic Activity and Altered Substrate Specificity *Karen Lynn Kaul and Raymond F. Novak* 470

Adriamycin as an Inhibitor of 11β-Hydroxylase Activity in Adrenal Cortex Mitochondria *Adela Cuéllar, Edgardo Escamilla, Jorge Ramírez, and Edmundo Chávez* 538

Methene Bridge Carbon Atom Elimination in Oxidative Heme Degradation Catalyzed by Heme Oxygenase and NADPH-Cytochrome *P*-450 Reductase *John C. Docherty, Gay D. Firneisz, and Brent A. Schacter* 657

PLANT BIOCHEMISTRY AND PHOTOSYNTHESIS

Stereoselectivity of 1-Aminocyclopropanecarboxylate Malonyltransferase toward Stereoisomers of 1-Amino-2-ethylcyclopropanecarboxylic Acid *Yu Liu, Ling-Yuan Su, and Shang Fa Yang* 319

Enzymatic Heme Oxygenase Activity in Soluble Extracts of the Unicellular Red Alga, *Cyanidium caldarium* *Samuel I. Beale and Juan Cornejo* 371

Variable Fluorescence of Photosystem I Particles and Its Application to the Study of the Structure and Function of Photosystem I *B. C. Tripathy, J. E. Draheim, G. P. Anderson, and E. L. Gross* 449

Subcellular Distribution of Acetyl-Coenzyme A Carboxylase in Mesophyll Cells of Barley and Sorghum Leaves *Basil J. Nikolau, Eve Syrkin Wurtele, and Paul K. Stumpf* 555

Thylakoid Membranes: The Translational Site of Chloroplast DNA-Regulated Thylakoid Polypeptides *Ei-Ichi Minami and Akira Watanabe* 562

The Origin of the Long-Wavelength Fluorescence Emission Band (77°K) from Photosystem I *T. Y. Kuang, J. H. Argyroudi-Akoyunoglou, H. Y. Nakatani, J. Watson, and C. J. Arntzen* 618

PROTEIN STRUCTURE AND FUNCTION

Effect of Mild Heat Treatment on the ATPase Activity and Proteolytic Sensitivity of Myosin Subfragment-1 *Adrianne Setton and Andras Muhlrad* 411

The Role of Copper and Quaternary Structure on the Conformational Properties of *Octopus vulgaris* Hemocyanin *Fernanda Ricchelli, Giulio Jori, Laura Tallandini, Paolo Zatta, Mariano Beltramini, and Benedetto Salvato* 461

Role of Metal Ions in Activity and Site:Site Heterogeneity in Isocitrate Lyase of Castor Seedling Endosperm
O. P. Malhotra, P. K. Srivastava, and U. N. Dwivedi 612

PROTEIN SYNTHESIS AND POST-TRANSLATIONAL PROCESSING

Comparative Analysis of Translation Accuracy in an *Escherichia coli* and a Mammalian Cell-Free System
Michael Laughrea, Anne-Marie Filion, and Carole Brochu 571

REGULATION OF METABOLISM AND OF ENZYME ACTION

Homoserine Kinase of *Escherichia coli*: Kinetic Mechanism and Inhibition by L-Aspartate Semialdehyde *Spencer L. Shames and Frederick C. Wedler* 359
Properties of the Resolved Catalytic Unit of Skeletal Muscle Adenylate Cyclase
George I. Drummond 427
Evidence That Cyclic AMP Stimulates Bacterial Glycogen Synthesis by Relieving AMP Inhibition of and by Increasing the Cellular Level of ADP-Glucose Synthetase *Mary P. Leckie, Sharon E. Porter, William G. Roth, Virginia L. Tieber, and David N. Dietzler* 493
Purification of the Phosphofructokinase Regulatory Factors
Dale A. Kruep and George A. Dunaway 504
Properties of the Phosphofructokinase Regulatory Factors
Dale A. Kruep and George A. Dunaway 512
Inhibitory Monoclonal Antibodies against Rat Liver Alcohol Dehydrogenase
Pushkaraj J. Lad, Dale B. Schenk, and Hyam L. Leffert 589
Phosphofructokinase from Foot Muscle of the Whelk, *Busycotypus canaliculatum*: Evidence for Covalent Modification of the Enzyme during Anaerobiosis
Kenneth B. Storey 665
AUTHOR INDEX FOR VOLUME 235 699
CUMULATIVE SUBJECT INDEX FOR VOLUMES 118–235 701

Instructions to Authors[1]

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. Manuscripts are welcome that contain new and significant information of general interest to workers in these fields. Sufficient detail must be included to enable others to repeat the work.

Manuscripts should be written in clear, concise and grammatical English and should be submitted in triplicate (one original and two photocopies), including three sets of figures, to:

Archives of Biochemistry and Biophysics
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. Contributors will receive decision letters from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Communications offer a means of early publication of work of such importance that rapid release is warranted. Normally they should not exceed 15 manuscript pages in length (including text, bibliography, tables, and figures). The review and printing of such papers will be expedited to provide earliest possible publication.

Form of Manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted. See the back cover for the listing of the Subject Areas.

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name and complete mailing address (and telephone number if possible) of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet: footnotes to tables should be identified by superscript lowercase italic letters (^{a,b}, etc.) and placed at the bottom of the table.

---

[1] An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reprints are available from the Editorial Office upon request. Authors should consult the extended Instructions for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and no larger than 8.5 × 11 in. Letters and numbers should be at least $\frac{3}{16}$ in. (4 mm) in height (Leroy lettering size 200). Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviations of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1980. Please note the following examples.

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **195,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds.), Vol. 4, pp. 246–409, Academic Press, New York.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.
